Javier Zubizarreta created new Tinysizer demo songs. This compact modular synthesizer has a monster sound based on Oberheim S.E.M. circuits, and monstrous possibilities of sound creation. The system contains a patch bay with 350 patch connections, and a variety of really useful modules, like sub oscillators, ring modulator, sample and hold, waveshaper, multiples, etc.

Just in case you wanna learn more about the Tinysizer: here’s the full review.
