Chameleon-like in its many control options, BeatStep is designed to work with DAWs, loop triggering software, VST-instruments or effects, MIDI hardware, or even CV/Gate-equipped analogue instruments (like Arturia's MiniBrute or MicroBrute synthesizer). Try triggering audio clips within powerful, flexible software environments such as Ableton Live or playing drum parts …

… in conjunction with the likes of FXpansion BFD or Toontrack EZdrummer… it's as easy as exercising your trigger fingers! CONTROL and SEQUENCER mode are available simultaneously, so it's perfectly feasible, for instance, to step sequence an ARP-2600 …

… keep that sequence running, then switch to CONTRL mode and use the pads to launch clips in Ableton Live while using the encoders to manipulate Arturia's latest SEM V soft synth (running on a computer connected via USB) …
