

## Doepfer A-192-2 CV/GATE-to-MIDI/USB interface

This new Doepfer A-100 module contains two independent CV/Gate-to-Midi/USB interfaces. It allows conversion of analog sequences to Midi/USB data (e.g. from the A-155 sequencer), generation of random Midi sequences and Midi control change data from analog voltages.

The data generated by the module is transmitted simultaneously to Midi Out and USB. Two or more A-192-2 modules can be daisy-chained via Midi Out - Midi In. And incoming Midi data is merged to the Midi output.
