

Well, that sounds exciting. No talk of “oscillators here” and “filter there”, no: this is a GRANULAR synthesizer, the **Tasty Chips Electronics GR-1**. A hardware musical instrument, offering hands-on controls to create characteristic textures and pads.

A sample and a few knob tweaks is enough to make something beautiful ...

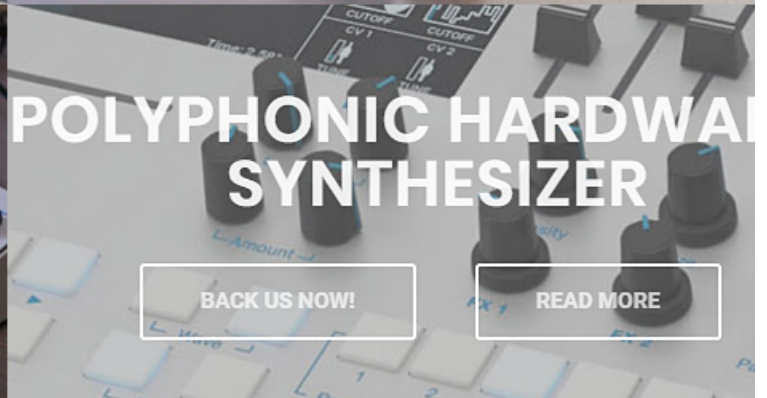

(c) Tasty Chips

The on-board controls and MIDI connectivity make it extremely easy to manipulate sound. Directness is nr. 1 in the design: knobs and sliders allow all granular parameters to be changed in seconds. The GR-1 also allows **stand-alone** operation: No MIDI keyboard required! The GR-1 has buttons and sliders to create 4 note chords or drones.
