

GRP A10 – the new monster-synth from Italy
 15 years after the legendary [GRP A8](#), which was built in 2009/2010 in a small edition of 23 units, the Italian company is once again announcing a “monster” studio synthesizer: **The GRP A10**. The instrument, measuring **120 x 56 cm** (width / height), will be manufactured in 2026. It includes **two independent synth channels**, an **R24 step sequencer**, an **arpeggiator**, several **analog effects** and more.

GRP A10 panel graphic (c) www.grpsynthesizer.it

With its **4 VCOs + 1 sub-oscillator**, the A10 doesn't quite reach the oscillator power of the A8 (which had 6 VCOs and 6 sub-oscillators), but scores with a general **more flexible oscillator-compartment**, an incredible **filter section (2x2 VCFs incl. VC resonance, 2x triple resonators)**, **BBD Delay / Phaser / Spring Reverb**, an 8-bus audio mixer, **dual wavefolder** and other extras.

Grp Synthesizer® **A10**

► a Single-Voice Synthesizer

... with four VCOs, four VCFs, two VCAs, two Waveshapers, two Triple Resonator Filters, a Dual Phaser, a 1-Sec BBD Stereo Delay, a Stereo Spring Reverb, four EGs, three LFOs, Sample/Hold, a RingMod, an Env Follower under control of the Step Sequencer (Mono or Dual Mode).

► a Bi-Timbric / Dual-Voice Synthesizer

... with an independent UPPER and LOWER section (Dual/Split Mode) freely controllable by MIDI / CV+Gate / Step Sequencer / Arpeggiator.

Besides the included (and expanded) GRP R24 Sequencer, the Arpeggiator and those Analog Effects, the GRP A10 comes with a generous array of Audio and control IN/OUT connections.

The GRP A10 in a nutshell ...

 GREATSYNTHESIZERS.com

The already very respectable modulation sources of the GRP A8 (and subsequently GRP A4) have been extended even further (now **21-fold** instead of 11-fold **routing switches**), the two **filter envelopes are voltage controllable** (!), the two VCA sections accommodate **4 (unfiltered) sine waveforms** (à la Yamaha CS synthesizer) and the significantly larger range of outputs/inputs (audio as well as CV) will surely make the studio musician's heart pulsate ...

The tonal and structural possibilities of the GRP A10 at a glance ...

GRP A10 – the new monster-synth from Italy

4x VCO (UPPER 1/2, LOWER 3/4), 1x Sub-Osc, Ext. In, VCO Sync, X-Mod (1/2, 2/3, 3/4), Ring-Mod

 GREATSYNTHESIZERS.COM

2x2 VC FILTER (12dB Vactrol, 24dB Transistor Ladder / 18dB Diode Ladder, 12dB State Variable Filter), true stereo - serial (1>2, 2<1) or parallel (filter pan), with Distortion and VC Resonance

 GREATSYNTHESIZERS.COM

VC Dual Phaser (6/12 stage each), 2x VC VCA plus 4x direct Sine waves (reminiscences of the Yamaha CS-series), Main Mixer (Dual Auto Pan) with LOWER / UPPER Volume / Pan (incl. sequencer control)

GREATSYNTHESIZERS.COM

In addition to the generous VCO-VCF-VCA architecture of the GRP A10, the performance options include an extended R24 step sequencer and a separate arpeggiator, which is a significant enhancements compared to the GRP A8.

GRP R24 Sequencer included ...

... and a powerful Arpeggiator ...

GREATSYNTHESIZERS.COM

Those **VC LFOs 1/2** are familiar from the GRP A8 / GRP A4, but feature extended possibilities in combination with the step sequencer. Eventually, the **“global” LFO 3** allows you to set independent mod-intensities for the LOWER and UPPER synth section ...

2x VC LFO (with clock sync options) plus 1x general LFO (with independent control for UPPER / LOWER synth section)

GRP A10 - the new monster-synth from Italy

The range of inputs/outputs has also grown significantly (as already indicated). Above all, the extensive audio outputs (which were present on the GRP A8, but have been reduced to a simple stereo out on the GRP A4) are back again: **4x stereo audio out** (pre master LOWER + UPPER, main out balanced + unbalanced), not to forget the **audio input** (external signal processing).

The GRP A10 also has **MIDI / USB**, of course, to be found on the rear. Definitely new are those inputs and outputs for the analog effects, as well as **2 “assignable” CV inputs** ...

I/O control panel including MIDI (rear side), CV/Gate IN for UPPER and LOWER, CV IN (VCFs, VCAs, LFOs, Assignable), Delay / Reverb / Phaser IN/OUT, Clock IN/OUTs, EXT Audio IN and various (Stereo) Audio OUTs

Some of the new “specialties” in detail: The analog effects are certainly the absolute novelty, never seen on a GRP synthesizer before. **BBD Stereo Delay** (with various clock divider options for each side, plus ping-pong), for example ...

GRP A10 - the new monster-synth from Italy

Specialities: 2x VC ENV (filter section, DAHDSR, controllable by Velocity / LFO / Sequencer), Dual BBD Stereo Delay

GREATSYNTHESIZERS.COM

... or the **Spring Stereo Reverb** (we'd call it Stereo Spring Reverb :o). Sample & Hold is, of course, may be old hat, but it is essential - especially in combination with the LFOs and the sequencer and delay-effect (keyword clock-sync).

Specialities: Spring Stereo Reverb (we'd call it Stereo Spring Reverb :o), Sample & Hold, Noise Generator, Envelope Follower (Audio IN)

GREATSYNTHESIZERS.COM

Dual phaser and the two triple resonator filter(s) à la Korg PS series - another novelty - round off the GRP A10 sound architecture ...

... just like the massive **mixer**. Up to **8 audio sources** can be **assigned individually and continuously (!) to the main filter sections**, whereby the two VC triple resonator filters are then activated / bypassed separately for each synth section.

GRP A10 – the new monster-synth from Italy

So far for now. The price of the GRP A10 is €10,000 + VAT for pre-orders placed by the end of 2025. The regular price thereafter will be €12,000 + VAT.

Picture: The GRP A10 will be approximately the same size as the GRP A8 (2009).
