

The GRP R24 is a 8×3 analog step sequencer firmly based on the mighty sequencer of the [GRP A8](#) and [GRP A4](#) analog synthesizer. The new R24 offers access to “both worlds”, it comes with CV/Gate, USB and MIDI! Hardware-wise, it is a self-powered stand-alone unit, with hardware compatibility for mounting the R24 in a 5U modular system. That means you can use it either as-is (with its case and internal PSU), or you can install the R24 in a Dot.com, COTK, Moon Modular system (and use the empty case for other 5U modules).

The R24 can memorize 64 sequences! Each sequence can be set to 8×3, 16+8 or 24 mode, with individual step lengths. In addition, there's an independent sample&hold circuit per row! The sequencer acts as CV/Gate sequencer or as MIDI sequencer, with separate rows for MIDI Note selection and Key Velocity step adjust.

Some close-ups of the panel graphic:

The complete panel graphic can be [downloaded here \(PDF\)](#).

Price is 1277 Euros + VAT + shipping costs. (VAT is not due to countries outside European Community or for companies into European Community that have a regular VAT number.)
