

The Waldorf kb37 CONTROLLER KEYBOARD can house up to 100 HP of Eurorack modules in its conveniently-angled panel sitting atop a 37-note, full-sized keyboard. It features a high-quality key-bed that transmits velocity and aftertouch. As such, the kb37 CONTROLLER KEYBOARD provides extremely flexible control for any mounted modules, thanks to its high-resolution, temperature-stable 16-bit CV (Control Voltage) interface and MIDI.

The kb37 is the main part of the so-called 'Eurorack Pack' — a stylish, state-of-the-art, self-contained modular synth system, comprising the keyboard and four modules for the ever-present Eurorack format.

nw1

We already presented the [nw1 Wavetable Module](#) in a short blog (with audio files). A worthy sound module, a must-have for any Eurorack-freak.

mod1

Three different modulation sources in one module make the mod1 MODULATOR MODULE ...

cmp1

The cmp1 COMPRESSOR MODULE is a true high-end analogue compressor ...

dvca1

The dvca1 DUAL VCA MODULE is built around two VCAs...

Back to the kb37 keyboard. It provides perfect connectivity and an array of realtime control elements such as PITCH and MODULATION wheels. The kb37 looks stunning and seems to be a fantastic controller for the creative musician. Great news from Waldorf!
