Roland Jupiter-80 V2 - three new Low Pass Filters

Version 2 adds three more Low Pass Filters to Roland's Jupiter-80. The internal EFXs are no longer limited to parallel routing, as Version 2 additionally brings serial routing.

We recorded four audiofiles to compare the different Low Pass Filters. The settings are moderate and with the exception of the filter mode all parameters are the same in all four audiodemos. No EFX used.

Roland Jupiter-80 V2 - now with serial and parallel EFX routing

We would like to thank Michael Menze of Rolandmusik.de for providing V2!
