

SynthPatch, the iOS app we have designed and developed for synth enthusiasts is out now for iPhone: <http://synthpatchapp.com> ...

SynthPatch provides a simple, and compact way of storing patch notations for non-preset synths. We've all lost too many paper sheets and photos of settings ourselves, and wanted to create a better way to save favorite sounds.

Currently, SynthPatch supports the Minimoog, SH-101, and Pro One. It includes custom presets, unlimited space for new presets, and will grow to include additional synths, sharing functionality, and more in the future.
