

Slowly but surely: Vermona completes its Eurorack portfolio step by step. Following the 4-way LFO module fourMulator, Vermona just released the 4-way envelope generator fourmative CONTOURS. And this is no ordinary envelope generator, not at all ...

VERMONA

fourmative CONTOURS

- 4x single-phase envelope generator
- Envelope times adjustable between 0,5 milliseconds and 30 seconds
- Envelope times expandable (CV IN) up to 2,5 hours (!)
- Envelopes can be chained and set as loop generator (> turning the module in an LFO / Oscillator)

 GREATSYNTHESIZERS.com

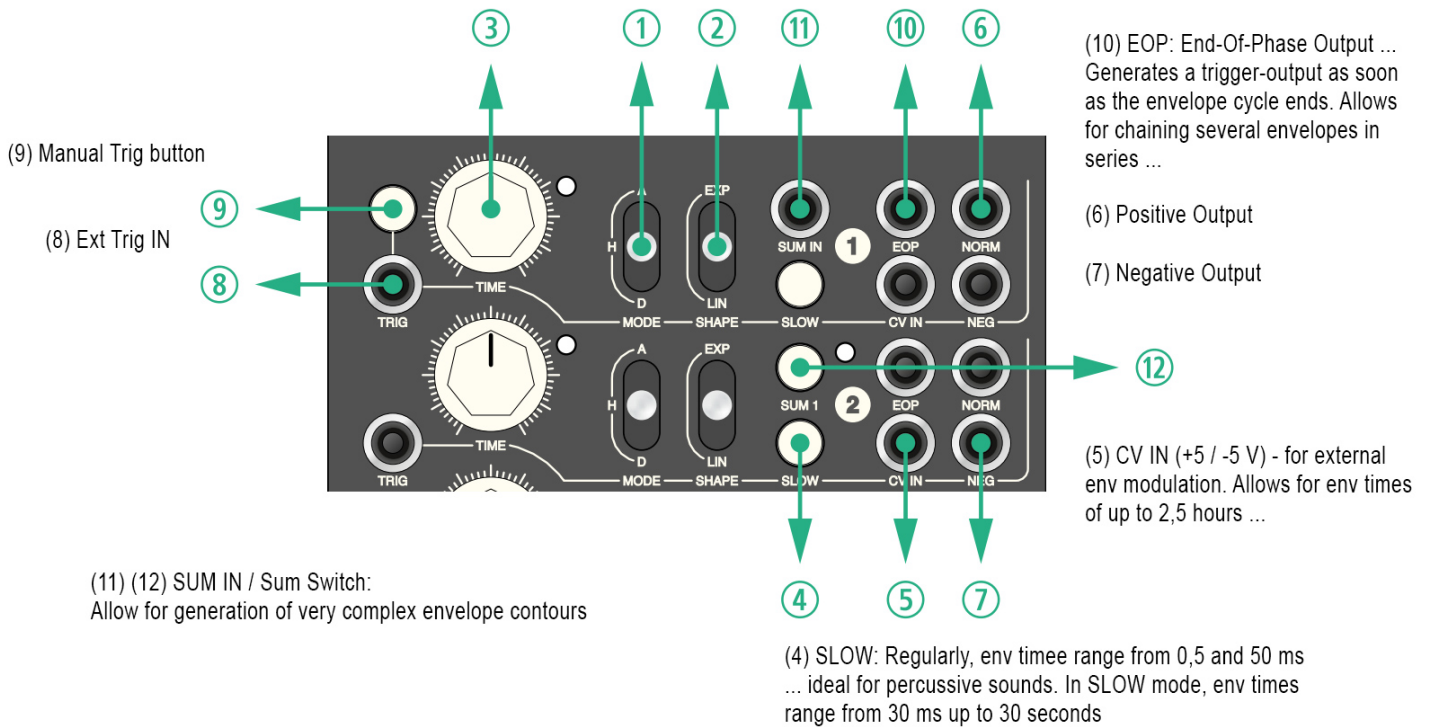

Envelopes? Uuuh, where? Granted, at first glance you miss those classic envelope controls. ADSR – where are those knobs? Fourmative CONTOURS is somehow special. It's more than a simple envelope generator. As you can see in the following graphic, the (creative) possibilities are considerable ...

Vermona fourmative CONTOURS: Heavy modulation stuff

(1) MODE: Basic shape of the envelope - Attack / Hold / Decay

(2) SHAPE: Characteristic of the envelope - EXP or LIN

(3) TIME: Adjustment of global envelope duration

GREATSYNTHESIZERS.com

So, what you get is a multiple modulation generator that can either act as complex envelope module, or as LFO / Oscillator - when cycling the envelopes. Envelope times may vary between 0,5 milli-seconds and - excellent! - 2,5 hours.

"At its extremes, the shortest possible time for the envelope is 25 microseconds and approx. 10,000 seconds (> 2.5 hours) for the longest duration." (Vermona)

All in all, **fourmative** CONTOURS appears to be an outstanding, flexibel and thus creative Eurorack module for complex modulation purposes.

Vermona *fourmative* CONTOURS

**4-way envelope generator/
LFO/Oscillator**
