

Roland SH-32 – Video by Ares Kalogeropoulos

The Roland SH-32 uses a Wave Acceleration Synthesis to deliver up to 32 voices of synth waves and new waveforms. There's also a fair complement of knobs and sliders, plus analog-style drums, DSP effects and a killer arpeggiator. A very compact machine, occasionally discussed as little brother of the brilliant JP-8000.

Video and music (it's all the SH-32) by Ares Kalogeropoulos.
