

## Waldorf Quantum – nobility in pole position

The Waldorf Quantum reminds us a little of the [Hartmann 20 Synthesizer](#) *en miniature* (well, not exactly *miniature*, but reduced). Be that as it may: This synthesizer makes a lasting impression. Especially notable its elitest design, its precious aluminum housing and its 5-octave keyboard. A “must-have”, so to say ...

Noble in design, high-quality aluminium casing, 5-octave keyboard: things that can't be taken for granted in these days of rather cheap light-weight plastic-synths with their 4-octave keyboards and external PSU ... Further evidence that it's not so much the global players that deliver high-quality products these days, but rather the middle-sized and smaller operations. Curious?
